

# Conservation Work Days on Shotover

Second Sunday of each month

10am - 3pm

Meet at Shotover Car Park  
Old Road, Headington, Oxford

Stay for as long as you like  
Everyone welcome

Wear suitable clothing and footwear  
Bring your own drink (and lunch)

No dogs please

If you come later, find us by phoning  
the SW mobile: 07881977481, or see  
the car park notice board map.

**Get away from it all ...  
... get yourself to Shotover !**

## Shotover Wildlife

Shotover Wildlife is an independent organisation of volunteer naturalists.

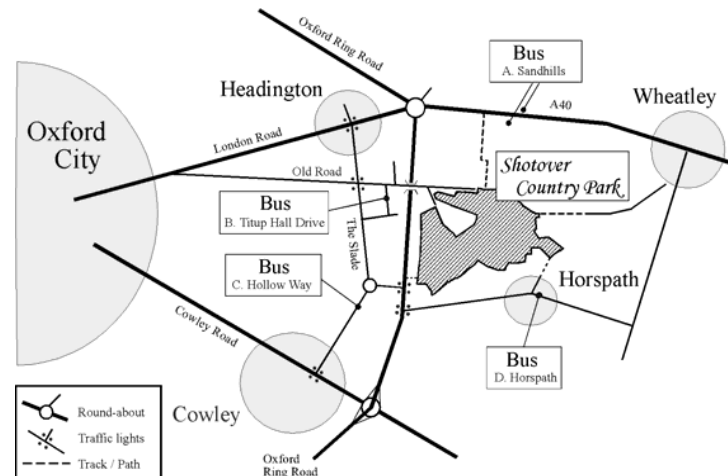

The organisation was founded in 1999 to research and communicate the importance of Shotover Hill for wildlife. We record the wildlife of Shotover Hill and Brasenose Wood, and conserve habitats for biodiversity.

SW members range from specialists to generalists, and from learners to experts. SW embodies life-long learning and supports school and university students with project work and research. We also run species identification courses. ....Join us!

## CONTACT

# CONSERVATION WORK DAYS

## on SHOTOVER

## Conservation Work Days

### Is this something you would enjoy?

We need as much practical help as we can get from people who care about wildlife in this large and complex nature reserve.

If you can spare a few hours, once a month on a Sunday, come and join us in making a real difference to wildlife diversity at Shotover.

You don't need any previous experience, as we provide all necessary guidance and instruction.

Our conservation work is based on specialist knowledge, research by Shotover Wildlife, and guidance from Natural England.

You'll meet like-minded people, in a very special nature reserve.

You can go at your own pace and stay for as long as you like, even for just an hour.

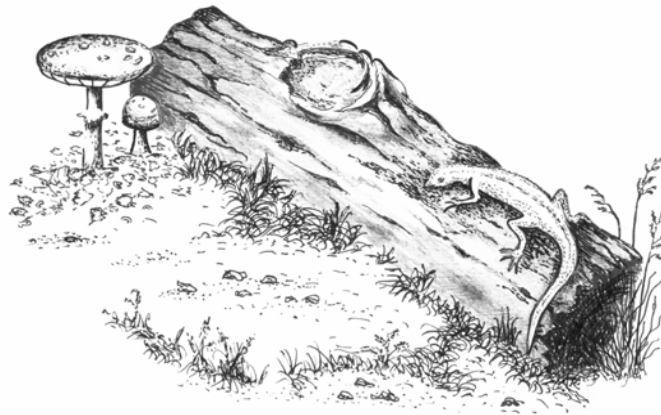

If you want to come in the afternoon, find us by phoning the SW mobile: 07881977481 or see the car park notice board map.

If it's raining, phone 01865 874423 or the mobile to check if the Work Day is going ahead.

Work supervised by Shotover Wildlife has full insurance cover.

### What work will you be doing?

- ❖ improving heathland ecology
- ❖ restoring marshes
- ❖ protecting Shotover's ancient trees
- ❖ building habitats for reptiles
- ❖ creating insect nesting sites
- ❖ and more ...

### What are the rewards?

- ❖ knowing that you are making a real difference to your local natural environment
- ❖ the opportunity to learn conservation skills, including work party leadership
- ❖ gaining knowledge about wildlife
- ❖ an appreciation of how you are helping to ensure the future of species diversity
- ❖ the opportunity to join Shotover Wildlife in managing species and wildlife habitats at Shotover

### How is wildlife protected?

Wildlife is an integral part of our environment. If we do nothing to conserve it, it will gradually disappear, or get built on. The government and other national organisations believe that wildlife diversity of the British Isles should be conserved and protected, and so we have a system of nationally recognized statuses or 'designations' for protecting our wildlife.

Probably the best-known designated sites are the National Nature Reserves (NNR) such as Snowdonia, the Lake District, and the New Forest. Following the NNR, is the Site of Special Scientific Interest (SSSI), of which Brasenose Wood and Shotover Hill is one, and is among the largest in Oxfordshire.

### Why does Shotover need conserving?

Shotover's habitats have gradually become less diverse over the decades. We know this through comparing our own survey work with Shotover's long history of recorded wildlife.

Shotover has SSSI status because it supports habitats that are rare in Oxfordshire, and therefore, some of the associated plants and insects are also rare.

### What is conservation?

The world is teeming with wildlife, from the rainforests of Brazil to the Canadian tundra. The British Isles is no different, with many thousands of species of wild plants, animals, insects, birds, fungi etc. Wildlife is everywhere, but it is also in decline. Some species are threatened with extinction, even in Britain, and one of the aims of Shotover Wildlife is to prevent the loss of rare species from Shotover.

Knowledge-based conservation is the key to preventing the decline of wildlife diversity.
